

Large Language Models : A Primer

Ever wonder how ChatGPT gets its “mojo” ? Learn more about one of its key components: LLM.

Large language Models (LLM) are a foundational component of Generative AI tools, such as ChatGPT.

This talk is a brief, gentle introduction to the structure of LLM with a simple example introducing its operation. The talk will also include a brief introduction to an open-source toolkit that can be used to build LLM.

Resources will be provided for a deeper dive into and reinforcement of LLM.

Only a very basic background in Python will be required to get the most out of this talk. A basic knowledge of database technology would not hurt, as well.
